

# ACTIVENAV CLOUD

High performance, low cost, secure cloud service for sensitive data discovery and cleanup across all your on-premise and cloud unstructured data repositories. Build an always-on inventory in record time.

## Sensitive Data Audit, Right Out of the Box

Purpose-built for unstructured data discovery, ActiveNav Cloud provides deep insights and delivers a sensitive data risk audit in a single pane of glass, right out of the box.

## Understand Your Data Risk Big Picture

Our proprietary classification and data scoring shows your overall risk exposure across all connected repositories. Sensitive data hotspots let you drill in to mitigate the problem.

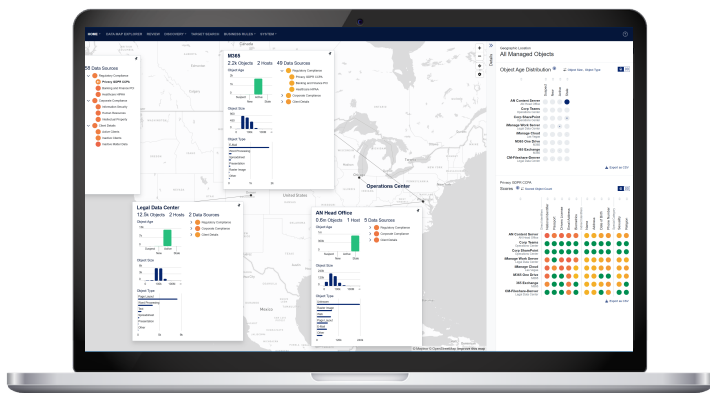

## Low Footprint, High Performance

As a true SaaS solution, ActiveNav Cloud costs very little to deploy and maintain. Its scalable and fast so you can continue to monitor data compliance and maintain an ever-green data inventory.

ActiveNav is a vital tool to help us in our organization's journey of determining the **age and the risk scores of our accumulated unstructured data**. Helping us be in compliance with record and information regulations and **sustain a leaner document, records and information repositories**.

Ruvilyn Gatchalian, CIP

High performance unstructured data discovery

On-premise and cloud repositories

Classification and regulated data risk scoring

Single pane of glass visualization across all discovered data

Unstructured data inventory and compliance data map

Data risk hotspot identification

Targeted search and Data Subject Access Request fulfillment

Aging, stale, duplication and unwanted data metrics

Managed review and disposal decision making

Audit trail for defensible disposal

## Use Cases

### Privacy Compliance

One of the foundations of privacy compliance is a reliable data map. For unstructured data repositories, ActiveNav Cloud digs deep and keeps your data map current. Its unique visualizations provide key insights to prioritize and drive defensible data disposal and its targeted search delivers DSAR fulfillment across all discovered data.

### Breach Preparation and Recovery

It's not a matter of if you'll get breached, but when. ActiveNav Cloud discovers and scores regulated and crown jewel data across all unstructured data repositories. This means you can mitigate the impact of a breach before it happens; what's more, after any breach event you can immediately identify what was compromised and manage your response based on the facts.

### Regulatory and Security Compliance

Information governance and stewardship extends beyond privacy regulations. ActiveNav Cloud covers data elements subject to any other regulation and can be configured for your organization's information security policies. In this way it underpins your entire information governance and compliance program.

### Data Cleanup

ActiveNav Cloud builds and maintains an evergreen inventory of all of your unstructured data. In addition to sensitive data scoring, it provides insights for aging, stale, duplicated and no-value data. This means that clean up can be effectively directed and orchestrated across all of your unstructured data to reduce costs and drive efficiencies across your infrastructure.

From the moment we began our engagement with ActiveNav, they have been eager to learn our needs. I was able to call upon them to further explain their risk management for our unstructured data stored in the cloud. The level of assistance to ensure our success in the use of their **robust and accessible dashboard** to manage and **assess the risk score of all our sensitive unstructured data** has been unmatched.

## About Us

We're data experts, and our North Star is Zero Dark Data. We believe that all organizations should be aiming for a state of Zero Dark Data so that they can act as good stewards of that data to minimize their cyber risk surface area, protect the interests of their customers, their staff and their other stakeholders. We've been working continuously with unstructured data in the wild for well over a decade and we think the market deserves data discovery products that just work. As a result we are trusted by leading companies and government agencies to help them understand and control their data assets to drive regulatory compliance, reduce the cost of data ownership and improve data quality.

- 15 Years of Experience
- 6 Continents and 28 Countries
- 15+ Billion Files Discovered
- 30K+ hrs Customer Deployments
- 300+ Customers and Counting

Aside from our fascination with Dark Data, we're engineers, designers, runners, gardeners, chefs, photographers, bikers, parents, skiers, cosplayers, hikers, gamers, travelers, mountain climbers, friends, race car drivers, readers, volunteers, and car enthusiasts. We value loyalty, accountability, and communication and care deeply about creating a sustainable future, supporting charitable causes as proud members of Pledge 1%.
